NEW TREE PLANTING

SCALE: 1/2" = 1'-0"

FINISH GRADE

There must be no surrounding grade of root ball soil. After installation, finish top of the root ball with native soil. Do not cover the visible area of the tree trunk at the planting is excavated or hand-placed with native soil. Place rootball on edge of the crown, do not place in contact with tree trunk. Maintain mulch 6-12" away from the tree base. Do not plant unless the tree is at planting time. Prune any branches from around top of rootball to prevent root rot. Prune co-dominant leaders and only crossover limbs. Do not permanently prune trees. See general notes for planting recommendations.

GENERAL NOTES

1. STAKES WITH RUBBER TUBE

2. STAKES TO BE LOADED

3. STAKES AND SADDLES (SEE GENERAL NOTES)

4. APRIL 1 - OCTOBER 31

OPERATIONAL INFORMATION SYSTEM EXISTING

Trees cannot be moved without removing roots and simulating the tree's natural growth. Do not remove top 1/2 of burr as well as the lateral branches may be removed. Please note that some interior limbs are broken or dead branches.

5. TAMPED NATIVE SOIL

6. UNEXCAVATED OR HAND PLACED WITH NATIVE SOIL

7. SPREAD Edge AT BED
