CONTENTS OF MOLECULAR CELL BIOLOGY

SEPTEMBER, 2000

PREPARED BY: PROF. YUSSUFPUR

## CONTENTS OF CELL BIOLOGY

### I. FOUNDATIONS FOR Cell Study

- A. An Overview of The Cell; Brief Historical Background
- B. Cell Structural Organizations
  - 1. Prokaryotes
  - 2. Eukaryotes
  - 3. The Virus
- C. Biological Molecules
  - 1. Carbohydrates
  - 2. Lipids
  - 3. Proteins
  - 4. Nucleotides and Nucleic Acids
  - 5. Water and pH
  - 6. Enzyme; The Catalysts of Life
- D. Bioenergetics; Free Energy and Measurement of Free energy
- E. The ATP System And The Flow Of Energy
- F. Oxidation- reductions And redox Potentials
- G. Energy Transfer By electron Carriers

### II. Membrane Structure and Functions

- A. Structural Model
- B. Movements of Substance Across Membranes
- C. Intercellular Communication Through Junctions

### III. THE CYTOPLASMIC COMPARTMENT OF THE CELL

- A. Ribosomes; General Features of Ribosomes
  - 1. Ribosome Formation
  - 2. Monomers and Subunits
- B. Mitochondria; Form And Structure
  - 1. Pathways of Energy Transfer
  - 2. Mitochondrial Compartmentation
  - 3. Biogenesis of Mitochondria
- C. Chloroplast and Photosynthesis; General Structure of Photosynthetic Systems
  - 1. Overall Reactions of Photosynthesis

2. The Light Reactions of Photosynthesis
3. The Dark Reactions Of Photosynthesis
4. Photorespiration
5. Fine Structural Features of Photosynthesis
6. Chloroplast Biogenesis

#### IV. Golgi Apparatus,

- A. Ultrastructure Organization
- B. Functions of The Golgi Apparatus

#### V. Lysosome

- A. Formation and Function
- B. Lysosome And Disease

#### VI. Microbodies

- A. Occurance And Identification
- B. Biochemistry and Functions
- C. Evolutionary Origins

#### VII. Centrioles

- A. Formation of Centrioles
- B. Centriolar Functions
- C. Cilia And Flagella
- D. The Motetic Apparatus
- E. Microfilaments And Muscle Movements

#### VIII. THE NUCLEAR COMPARTMENT

- A. The Nuclear Envelope
- B. The Nucleolus
- C. The Chromosomes
- D. Heterochromatin And Euchromatin
- E. Polytene Chromosome

#### IX. MITOSIS AND MEIOSIS

- A. The Cell Cycle
- B. Mitosis

## I. Nucleic Acids Structure And Functions

## A. The Genetic Material

1. The Double Helix
2. DNA Analysis
3. Denaturation and Renaturation of DNA
4. Replication of DNA
5. Information Storage And Flow
6. Deciphering The Genetic Code
7. General Features of Genetic Code

## 8. Regulatory And Structural Genes

## II. Protein Synthesis ; Genetic Activities Of Organelles

- A. Polypeptide Synthesis
- B. Protein Synthesis at the Rough Endoplasmic Reticulum
- C. Mitochondrial Protein Synthesis
- D. Chloroplast Protein Synthesis
- E. Chemical Inhibitors Of Protein Synthesis

## PART THREE: Medical Genetics

## A. Basic Principles

1. Human Genetics In Perspective
2. Chromosomes
3. Gametogenesis
4. Chromosome Aberrations
5. Autosomal Inheritance
6. Sex-Linked Inheritance
7. Gene Mapping
8. Non-Mendelian Inheritance
9. Population Genetics

## B. Clinical Applications

1. Genetic Assessment And Counselling
2. Chromosomal Disorders
3. Single-Gene Disorders
4. Immunogenetics
5. Genetics of Common Diseases
6. Cancer Genetics
7. Congenital Malformations
8. Parental Diagnosis
9. Population Screening
10. Prevention And Treatment
