Dynamic System Property: \textit{atisEnvironmentalChangeness}

(Dynamic system properties are those properties that are part of the theory and describe patterns in time as change occurs within a system or between a system and its negasystem.)

Environmental changeness, $\Delta S'$, $\overset{df}{=} \text{change in negasystem state.}$

$$\Delta S' = \overset{df}{=} \Delta S'$$

Environmental changeness is a change in the negasystem state.
