Werner\textsuperscript{3rd} System Type: \textit{atisFieldedMilitarySubsystem}

(Werner\textsuperscript{3rd} System type is part of the metatheory and describes configurations and properties that characterize a specific system. There are 5 main Werner\textsuperscript{3rd} subsystems that partition a system into 5 subsystems.)

\textbf{Fielded military subsystem}, \(\overline{\varnothing}\), =\textit{df} the subsystem of a Werner\textsuperscript{3rd} system that maintains a system as a homeostatic system.

\[\overline{\varnothing} = \text{df} \{\mathcal{O} \mid \mathcal{A}_{H(\mathcal{O})}\}\]

\textbf{Fielded military subsystem} is defined as a Werner\textsuperscript{3rd} subsystem; such that, the Werner\textsuperscript{3rd} fielded military components, \(\mathcal{F}_{E}\), define the object-set of the subsystem and the system’s homeostatic affect relations, \(\mathcal{A}_{H(\mathcal{O})}\), define the relation-set of the subsystem.

The \textit{atisFieldedMilitaryComponents}, \(\mathcal{F}_{E}\), are those components of the system object-set, \(\mathcal{O}\), that are defined by the \textit{atisHomeostaticAffectRelations}, \(\mathcal{A}_{H(\mathcal{O})}\).
