

Figure 2 Southwestern Mongoloid

- |                              |                                   |
|------------------------------|-----------------------------------|
| Keeled skull                 | Shoveling of incisors             |
| Short base chord             | Incisor rotation                  |
| Base angle high              | Enamel extensions                 |
| Major sutures complex        | Buccal pits                       |
| Wormian bones                | Elliptic dental arcade            |
| Other ossicles               | Blunt chin                        |
| Rounded orbits               | Vertical chin                     |
| Nasal opening flared at base | Straight mandibular border        |
| Slight nasal depression      | Wide ascending ramus              |
| Tented nasals                | Vertical ascending ramus          |
| Nasal overgrowth             | Everted gonion angle              |
| Small nasal spine            | Elliptic external auditory meatus |
| Blurred nasal sill           | Oval window not visible           |
| Projecting zygomatics        | Inferior collar                   |
| Malar tubercle               | Straight palatine suture          |
| Zygomatic posterior tubercle | Angled zygomaticomaxillary suture |
| Moderate prognathism         |                                   |
