RE: Postdoctoral position in optical interactions in self-organized materials in the laboratory of Dr. Bogdan Dragnea

One postdoctoral research associate position is available starting December 2013 in the Dragnea research group at Indiana University in Bloomington. The work involves combining electromagnetic simulations and phase transition experiments in dense systems of particles with optical interactions. Successful candidates will have a background in optics or soft condensed matter, and will be interested in interdisciplinary work in collaboration with materials scientists, and chemists. Experience with near-field optics and/or plasmonics is a plus.

Interested candidates should email or call Professor Bogdan Dragnea for further information. Review of complete applications will begin on November 1, and will continue until the position is filled.
