Course: CINS 102 Information Systems Fundamentals

Introduces information processing and programming with emphasis on hands-on computer experience. Examines the role of information processing in an organization including: information processing applications, computer hardware and software, internal data representation, stored program concepts, systems and programming design, flowcharting, and data communications. Review the history of computers, related computer careers, the social impact of computers, and computer security.

Bio

Bill Worden has been an Assistant Professor at Ivy Tech Community College since 2001, teaching Information Technology related classes in the Business Division, Departments of Computer Information Technology (CINT), Computer Information Systems (CINS), Information Security (INSE), and Computer Science (CSCI). He has an MS in Information and Communication Sciences and a BS in History from Ball State University, and is in the dissertation phase of a PhD in Information Technology from Capella University. In addition, he holds multiple IT certifications.
