A vast and little known expanse, Inner or Central Eurasia is the historic home of nomadic conquerors, centers of Islamic and Buddhist learning, and some of world’s most striking natural vistas. Today, the Inner Asian and Uralic National Resource Center (IAUNRC) at Indiana University offers you and your students the opportunity to experience the cultures and peoples of multifaceted Central Eurasia.

The IAUNRC brings together experts and educational resources on a tantalizing diversity of Central Eurasian locales: Estonia, Finland, Hungary, Turkey, Azerbaijan, Tibet, Mongolia, Xinjiang, and the Central Asian countries of Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan. Some of these areas are prominent in the news today: oil-rich Central Asia; Tibet’s controversial relationship with the Dalai Lama and struggle for autonomy in China; Turkey’s balance between Europe and the Middle East. Yet it is the lands we hear little of—the Roof of the World in Tajik Badakhshan, the wide-open Mongol Steppe, or Finland’s Lapland—that can prove the most striking and worthy of exploration.

The IAUNRC is always interested in new and innovative ways to broaden knowledge about the Central Eurasian region. In the pages that follow, we’ve highlighted a series of topics at the fore today in Central Eurasian studies, which we hope will serve as the basis for ongoing conversations and the start of possible collaboration.
LEARNING OUTCOMES: 10 THINGS STUDENTS SHOULD LEARN ABOUT CENTRAL EURASIA

1. We’ve heard of Marco Polo and his travels along the Silk Road, but where was it located? The world’s most important trade routes once crossed through Central Eurasia.

2. Chinggis (Genghis) Khan and Tamerlane are famous historical figures whose legacies can be seen today in the massive palaces they built, the fortresses they leveled, and the capitals from which they ruled.

3. From Merv to Balkh to Bukhara-i-Sharif, Central Eurasia has long been home to some of world’s most important centers of Islamic learning and culture.

4. The quickly disappearing Aral Sea (Uzbekistan / Kazakhstan) remains today a poorly known but internationally important ecological disaster.

5. On the fringe of the USSR only twenty years ago, Estonia has since emerged as a center of technological advancement and economic growth in the EU.

6. Tibet has given us more than just the Dalai Lama, the monasteries of Tibet have for centuries generated oral epics, written histories, and Buddhist teaching of worldwide import.

7. Hungarian, Finnish, and Estonian, together with Komi, Mari, and other Finno-Ugric languages, make up the broader Uralic language family.

8. The spring holiday of Navruz, an ancient Iranian and Zoroastrian equinox celebration, is now celebrated across the region and the world.

9. Nomadic pastoralism, also known as herding, historically was a key lifestyle for peoples throughout the Eurasian steppelands, from Mongolia to Hungary.

10. Baku, Azerbaijan was the world’s first oil “boom-town,” and Central Eurasia remains a region rich with oil, natural gas, and other natural resources.
Drug Trade

With Afghanistan continuing to produce the vast majority of the world’s opium and heroin, neighboring countries, such as Iran, Turkmenistan, and Tajikistan have become an important corridor of illegal trade to the rest of the world. Heroin and other narcotics travel through Central Asia to Russia, and from there to Europe, or through Iran to the Middle East and then further. No matter the route, the drug trade negatively impacts local structures of governance and encourages the growth of “gray” economies.

Kurdish Efforts for Greater Autonomy

A people with roots stretching back centuries across Central Eurasia, Kurds are currently a minority population in many countries of the region, including Turkey, Iran, and Turkmenistan. Without a state or nominal “homeland” available for them to turn to, Kurdish populations have frequently sought increased levels of localized autonomy and privilege within one or another state, which has brought them into conflict with the authorities. In some countries, such as Turkey, this has escalated into violent confrontations and the use of terrorist tactics. 2013 brought peace talks with the Turkish government but also larger conflicts with Syria and Iraq about oil exports.

Resources:

ENVIRONMENT AND HUMAN IMPACT

Water Use

From the Aral Sea along the Kazakh-Uzbek border, to the Ragun Dam that has embroiled Uzbekistan and Tajikistan in an ongoing diplomatic war of words, to the delineation of international waters in the Caspian Sea, water rights and water usage are an issue of region-wide scope and import. As a region covered by many deserts and arid plains, water and irrigation have been for centuries at the heart of diplomacy and politics. This remains true today, especially as sources of water become fewer and further in between. The disappearing Aral Sea is but one such example.

Resources:

Logging & Paper Mills

Description: The Baltic basin and Scandinavia are home to some of the world’s largest remaining old-growth pine forests, a bounty of natural wealth that both Finland and Estonia share in. In past decades, however, logging concerns – for example, the Finnish paper-making giants Stora Enso and UPM – have significantly increased the expanse and breadth of their operations. This has led to increased concern over the long-term loss of old-growth forests in this corner of Eurasia, as well the threat this poses to sustainable economic growth in the region.

Resources:

Central Asian Oil and International Energy Security

Many countries in Central Asia have vast deposits of oil and gas, leading international investors to rethink their reliance on the Middle East for these resources. Azerbaijan, a large country in the Caucasus region, has already made built or planned several transnational pipelines, with the Trans-Anatolian pipeline connecting the region to Turkey and the European Union to potentially help shore up its energy security. China has also increased their presence in such countries as Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, and Uzbekistan as they are the second largest consumer of energy in the world.

Resources:

The rising role of Kazakhstan in Nuclear Energy

Under the Soviet Union, the Semipalantinsk Test Site was used for over forty years to test nuclear weapons, and even though Kazakhstan immediately closed the site after their independence in 1991 the local population still suffers from health problems. This first-hand experience of the harm of nuclear weapons has made them very active internationally working towards nuclear disarmament. Kazakhstan however has also been active in exploring the benefits of nuclear technology, as it has rich uranium reserves and has been the world’s biggest uranium producer since 2009. To this end, Kazakhstan has proposed opening a civilian nuclear fuel bank that would help other countries meet their energy needs with safely produced enriched uranium to power their nuclear plants. Over 30 countries today use nuclear energy, as it is cheaper and has lower carbon emissions, contributing significantly less to global warming.

Resources:

Hip-Hop

**Description:** Across much of the former USSR, including Central Asia and the Caucasus, a local blend of western rap, Russian-influence themes, and traditional music styles is growing in popularity and importance. Today in Bishkek, Kyrgyzstan, Almaty, Kazakhstan, or Krasnovodsk, Turkmenistan, local MCs are recording tracks and gaining followings. In Azerbaijan, hip-hop artists have even become involved in political protests and are now an important element of a burgeoning reform movement.

Avant-Garde Film

**Description:** While France may have the weight of history behind it, other countries are catching up when it comes to producing independent, important, and critically acclaimed film. This includes many of the IAUNRC’s areas of interest: Iran, Hungary, and Finland are amongst some of the most outstanding examples. In Hungary, a long and well-established tradition of filmmaking has produced masterpieces such as Bela Turin’s *Werkmeister Harmonies* and *The Turin House*; in Finland, recent years have seen the release of difficult-to-categorize but culturally important material like *The Cuckoo*; Iranian-émigré material such as *Persepolis* has been wooing audiences, and juries, the world over; and in Tibet a new wave of Tibetan film makers is producing films like *Old Dog* that portray a lesser-seen side of Tibet set in the complexities of everyday modern life.
