The Scientist’s Best Friends

Research Animals in the Life Sciences

A Lecture Series for Themester 2018-19

Animal/Human, hosted by the History & Philosophy of Science & Medicine (HPSC) department

Animals have played a significant role in the history of the Life Sciences, as model systems to conduct medical research and to obtain insights into “the mystery of life”. Understanding the history of animal studies in the life sciences will lead us to better understand how they have developed into their current framework and what reasons were there for using some animals more than others. Talks will expose the audience to various perspectives on the topic, and will touch upon historical, methodological, and ethical issues. Speakers are experts across campus.

Guest speaker details and an abstract please visit our website at http://www.indiana.edu/~hpscdept/news/previous.shtml
