Analog synthesis terms

Prof. Jeffrey Hass

Voltage control
Voltage-controlled modular synthesizer
Subtractive synthesis
Waveforms (sine, triangle, sawtooth, pulse)
Spectra
Pulse width
Duty cycle
Square wave
White or pink noise
VCO-voltage-controlled oscillator
VCA-voltage-controlled amplifier
VCF-voltage-controlled filter
Envelope Generator
ADSR
AC Control Voltage
DC Control Voltage
Patch
Basic patch
Attenuator
Offset
Gate
Modulation (frequency modulation, amplitude modulation, filter modulation)
Subaudio-rate modulation
   Vibrato (subaudio-rate frequency modulation)
   Tremolo (subaudio-rate amplitude modulation)
Audio-rate modulation
Ring Modulation
Sample and hold

Filters:
   Cutoff Frequency (c.o.f.)
   Q
   Resonance
   Formants
   Bandwidth
   Passband
   Stopband
   Lowpass, Highpass, Bandpass, Notch filter types
   Cascade or series filter network
   Parallel filter network
